

Practitioner: *Teresa Ochoa, licensed esthetician and owner of the 400-sq.-ft. Natural Faces Spa in Huntington, New York*

Device of choice: The Celluma PRO Professional LED Panel by BioPhotas

How it works: The Celluma is a hands-free, portable, lightweight and FDA-cleared device used to provide light therapy. Research has shown that blue, red and near-infrared LED light therapy is safe and effective for the treatment of acne and pain, as well as for anti-aging procedures.

Why it's a favorite: "I can incorporate Celluma into many of my facial and body treatments with ease," Ochoa says. "I've seen it provide results quickly. Even with just a couple of treatments, my clients' skin looks more luminous, plump and bright. Also, they're completely relaxed under the gleaming lights—sometimes they even fall asleep!" The device offers several settings to combat acne, fine lines and wrinkles, loss of collagen and even pain, she adds.

Ease and convenience are major aspects of the Celluma's appeal for Ochoa. "I can bend it, place it directly on the skin and wrap it around the area I'm treating. Also, it's portable and travels well in its protective case," she says. "As an esthetician, I try to research the best products and equipment to benefit my clients and my business. Celluma fits those criteria. I even use it on myself at home!"
